The SM-VBKT provides an easy way to panel-mount a Smart product with the Ethernet ports facing forward.

Each Smart product (Smart Netbox, Smart SoftPLC/Gateway, Smart Adapter) comes standard with a DIN-rail mount kit to mount "flat", or with the Ethernet ports facing to the left. Unless the Tealware Backplane3 interface, PCI-104 option or local I/O boards are installed, it often is desireable to mount the Smart with the Ethernet ports facing forward. This reduces the horizontal panel space requirements and makes it easier to plug Ethernet cables in/out.

The screws to attach the bracket to the Smart are included. If you need to provide your own screws, use a Stainless Steel Panhead Phillips #6-32 x 1/4".
